Status: Downloaded newer image for saravanan147/hello1: latest docker.io/
Nileshnarayan117/hello1: latest
C:\Users\ Nileshnarayan117>
```

```
C:\Users\ Nileshnarayan117>docker run -p 5000:5000 -d saravanan148/hello1
ab0e48953acec7489e48590606df4aeb3b59c6b9c66fba64e5e537b41dc59350
C:\Users\ Nileshnarayan117>
```

## Question-2

Create a docker file for the jobportal application and deploy it in Docker desktop application.

```
# init a base image (Alpine is small Linux distro)
FROM python:3.10.8-alpine
# update pip to minimize dependency errors
RUN pip install --upgrade pip #
define the present working directory
WORKDIR /hello1
# copy the contents into the working dir
ADD . /hello1
# run pip to install the dependencies of the flask app
RUN pip install -r requirements.txt
```

```
# define the command to start the container
CMD ["python", "app.py"]
```

(venv) PS C:\Users\Nileshnarayan117\PycharmProjects\hello1> docker image build -t hello1 .

## Question -3

Create a IBM container registry and deploy helloworld app or jobportalap

```
C:\Users\ Nileshnarayan117>docker push jp.icr.io/ Nileshnarayan117/hello-world:hello
The push refers to repository [jp.icr.io/ Nileshnarayan117/hello-world]
